Software Development Plan (Small Project)

1. Introduction

1.1 Purpose

The purpose of the *Software Development Plan* is to gather all information necessary to control the project. It describes the approach to the development of the software and is the top-level plan generated and used by managers to direct the development effort.

The following people use the *Software Development Plan*:

- The **project manager** uses it to plan the project schedule and resource needs, and to track progress against the schedule.
- **Project team members** use it to understand what they need to do, when they need to do it, and what other activities they are dependent upon.

1.2 Scope

This *Software Development Plan* describes the overall plan to be used by the ShopNowHub project, including deployment of the product..

The plans as outlined in this document are based upon the product requirements as defined in the *Vision Document*.

1.3 Overview

This *Software Development Plan* contains the following information:

Project Overview — provides a description of the project's purpose, scope, and objectives. It also defines the deliverables that the project is expected to deliver.

Project Organization — describes the organizational structure of the project team.

<ShopNowHub>	Version: <1.0>

2. Project Overview

2.1 Project Purpose, Scope, and Objectives

- Purpose:
 - Real-World Relevance: E-commerce has become an integral part of our daily lives, and understanding the dynamics of online shopping is highly relevant in today's digital age.
 - Practical Skills: Building an online shopping website provides us with practical experience in web development, design, and management, which are valuable skills in the job market.
 - Entrepreneurship: It encourages entrepreneurial thinking by allowing us to explore the complexities of running a business, managing inventory, and serving customers online.
 - Problem Solving: We can encounter and tackle real-world problems that arise during the development and operation of an online shopping platform, enhancing our problem-solving skills.
 - Innovation: It encourages creativity and innovation as we need to seek to differentiate our online store from competitors.
- Objectives: demonstrate the critical importance of e-commerce in people's daily lives
- Scope: an online shopping website with completed pivotal roles of various stakeholders: the admin who manages the site, users who shop for products, sellers who list and sell items, and guests who browse.

<ShopNowHub>	Version: <1.0>
Software Development Plan (Small Project)	Date: <01/11/2023>
<document identifier>	

2.2 Assumptions and Constraints

2.2.1 Assumptions

1. **User Internet Access:** all users have reliable access to the internet to use the website.
2. **Website Maintenance:** a team will be available for regular website updates and maintenance.
3. **Customer Support:** a team will be available to provide customer support services.

2.2.2 Constraints

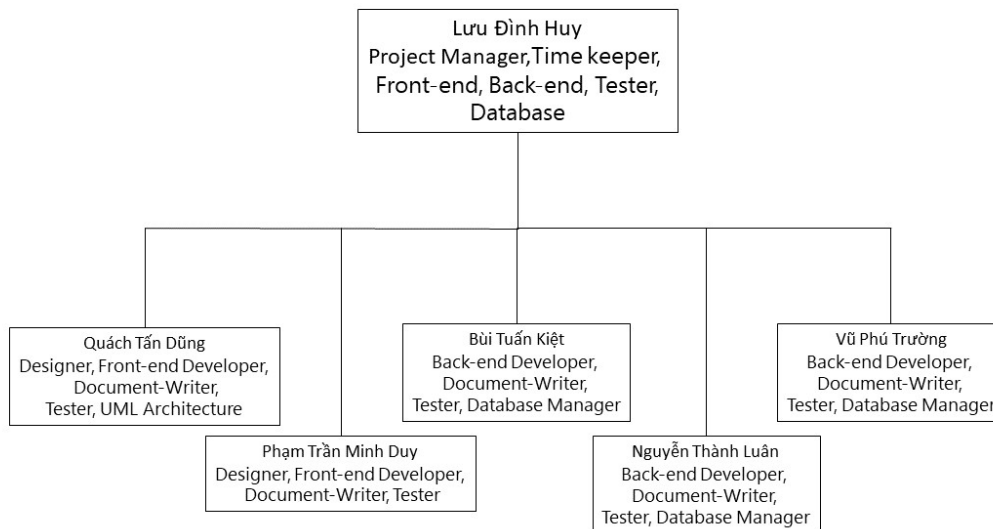

1. **Regulatory Compliance:** the website must comply with all legal requirements of the Socialist Republic of Vietnam.
2. **User Interface:** website's user interface should be engaging, intuitive, high-quality visuals.
3. **Cross-Platform Compatibility:** the website can be used on multiple browsers (Chrome, Firefox, Safari,...) on multiple devices.

2.3 Project Deliverables

- The final deliverable of this project is a website with completed key features and documents.
- Deliverables are delivered towards the end of the iteration, as specified in section 4.2.4 *Project Schedule*

3. Project Organization

3.1 Organizational Structure

3.2 Roles and Responsibilities

Person	Role
Lưu Đình Huy	Planning/scheduling activities Divide work among members Customer Surveys

<ShopNowHub>	Version: <1.0>
Software Development Plan (Small Project)	Date: <01/11/2023>
<document identifier>	

	Designing and maintaining the server infrastructure Conducting the final product examination Provide assistance to other roles as necessary.
Phạm Trần Minh Duy	Responsible for ensuring the website is visually consistent and user-friendly Conducting cross-browser testing Documenting, examine the product Work on product displays, images, typography, color schemes, and branding elements
Quách Tấn Dũng	Translating design mockups into functional web pages Optimizing the website for various devices and screen sizes Implementing interactive features Designing UML Documenting, examine the product
Bùi Tuấn Kiệt	Managing databases to store product information, customer data, and order details Create and optimize APIs for functionalities Documenting, examine the product
Vũ Phú Trường	Optimizing website performance Ensuring data backup and recovery Monitoring and logging for system reliability Documenting, examine the product
Nguyễn Thành Luân	Secure user authentication and authorization mechanisms Integrate payment gateways for safe and seamless online transactions Prioritize website security by guarding against vulnerabilities Documenting, examine the product

4.2 Project Plan:

- PA0 - 2 weeks:

Start: 09/10/2023

End : 21/10/2023

Task: + Guide team members on the essential tools for the project such as Slack, Jira, Github, VS Code
(*Lưu Đình Huy*)

+ Research and follow the project management instructions provided.

(*Phạm Trần Minh Duy, Quách Tấn Dũng, Bùi Tuấn Kiệt, Nguyễn Thành Luân, Vũ Phú Trường*)

Documentation: Weekly Report

Name	↓ :	Oct 08, 2023							Oct 15, 2023						
		S	M	T	W	T	F	S	S	M	T	W	T	F	S

4.3 Project Monitoring and Control

Requirements Management

The requirements for this system are captured in the Vision document. Requested changes to requirements are captured in Change Requests, and are approved as part of the Configuration Management process.

4.3.1 *Reporting and Measurement*

Updated cost and schedule estimates, and metrics summary reports, will be generated at the end of each iteration.

The Minimal Set of Metrics, as described in the RUP [Guidelines: Metrics](#), will be gathered on a weekly basis. These include:

Earned value for completed tasks. This is used to re-estimate the schedule and budget for the remainder of the project, and/or to identify need for scope changes.

Total defects open and closed – shown as a trend graph. This is used to help estimate the effort remaining to correct defects.

Acceptance test cases passing – shown as a trend graph. This is used to demonstrate progress to stakeholders.

In addition, overall costs will be monitored against the project budget.

<ShopNowHub>	Version: <1.0>
Software Development Plan (Small Project)	Date: <01/11/2023>
<document identifier>	

4.3.2 Risk Management

Risks will be identified in Inception Phase using the steps identified in the RUP for Small Projects activity “Identify and Assess Risks”. Project risk is evaluated at least once per iteration and documented in this table. The risks of the greatest magnitude are listed first in the table.

Risk Ranking (High, Medium, Low)	Risk Description and Impact	Mitigation Strategy and/or Contingency Plan
High	<ul style="list-style-type: none"> Description: Seminar deadline overlap. Impact: Causes stress on team members and time lost on developing the product. 	Mitigation Strategy: <ul style="list-style-type: none"> Keep track of deadlines and project. Break down work into smaller tasks for flexibility in time planning. Contingency Plan: <ul style="list-style-type: none"> Prioritize each project and task by urgency. Be honest with your team members and ask for help when needed.
High	<ul style="list-style-type: none"> Description: Data loss due to technical problems. Impact: Have to start from scratch, lose valuable time. 	Mitigation Strategy: <ul style="list-style-type: none"> Always make a data backup after some time or milestone. Contingency Plan: <ul style="list-style-type: none"> Prioritize remake key features and all requirements of the seminar. Be honest with your team members and ask for help when needed.
High	<ul style="list-style-type: none"> Description: Miscommunication within the project team. Impact: Leading to missed requirements, product will not meet expectation. 	Mitigation Strategy: <ul style="list-style-type: none"> Ensure a detailed, shared requirements document with updates logged clearly Conduct daily stand-ups for team updates and address immediate blockers. Hold regular review meetings to align deliverables with project scope. Clearly delineate roles and responsibilities to avoid task overlaps. Utilize tools like JIRA for task tracking and Slack for team communication. Establish channels specifically for queries and clarifications. Engage with stakeholders consistently to validate alignment and gather feedback. Implement a peer review system, allowing team members to check and validate each other's work against project requirements.
Medium	<ul style="list-style-type: none"> Description: Lack of necessary skills and knowledge Impact: Work progress will slow down and maybe stagnate. 	Mitigation Strategy: <ul style="list-style-type: none"> Go to class to learn and get help from Lecturer and TA. Read more documents and books to gain more knowledge. Practice to gain necessary skills.
Low	<ul style="list-style-type: none"> Description: Some members cannot work because of various reasons. Impact: Lack of personnel will slow down progress. 	Mitigation Strategy: <ul style="list-style-type: none"> Break down work into smaller tasks for flexibility in re-assigning work. Contingency Plan: <ul style="list-style-type: none"> Remaining team members try to share the workload of the absent one.
Low	<ul style="list-style-type: none"> Description: Cannot schedule a meeting because of a difference in personal time. Impact: Lack of personnel will slow down progress. 	Mitigation Strategy: <ul style="list-style-type: none"> Schedule meeting weeks in advance for team members to resolve conflicting personal responsibilities and work commitments. Break down work into smaller tasks for flexibility in re-assigning work. Contingency Plan: <ul style="list-style-type: none"> Remaining team members try to share the workload of the absent one.

4.3.3 Configuration Management

Appropriate tools will be selected which provide a database of Change Requests and a controlled versioned repository of project artifacts.

<ShopNowHub>	Version: <1.0>
Software Development Plan (Small Project)	Date: <01/11/2023>
<document identifier>	

All source code, test scripts, and data files are included in baselines. Documentation related to the source code is also included in the baseline, such as design documentation. All customer deliverable artifacts are included in the final baseline of the iteration, including executables.
